Номинальные статические характеристики  
преобразования

3044—84

Thermoelectric converters. Nominal static graduation  
tables

(СТ СЭВ 1059—85)

ОКП 42 1150

Срок действия с 01 04 86

до 01.01.92

в части преобразователей типов ТХА, ТХК, ТМК

с 01.01.87

Несоблюдение стандарта преследуется по закону

1. Настоящий стандарт распространяется на термоэлектрические преобразователи с металлическими электродами и устанавливает номинальные статические характеристики (НСХ) преобразования термопар, т. е. зависимость термоэлектродвижущей силы (т. э. д. с.) термопар от температуры рабочего конца при температуре свободных концов  $0^{\circ}\text{C}$ .

НСХ преобразования термопар термоэлектрических преобразователей составлены в соответствии с МПТШ-68 по ГОСТ 8.157—75.

Степень соответствия настоящего стандарта СТ СЭВ 1059—85 приведена в приложении 7а.

(Измененная редакция, Изм. № 2).

2. Типы термоэлектрических преобразователей, условные обозначения НСХ преобразования термопар термоэлектрических преобразователей, диапазоны измеряемых термопар при длительном и кратковременном применении должны соответствовать приведенным в табл. 1.

3. Расчет пределов допускаемых отклонений т. э. д. с. термопар термоэлектрических преобразователей в температурном эквиваленте от номинального значения следует проводить по формулам, указанным в обязательном приложении 1.

1—3. (Измененная редакция, Изм. № 1).

4. Режим кратковременного применения должен быть указан в стандартах или технических условиях на термоэлектрические преобразователи конкретных типов в зависимости от условий их эксплуатации.

5. НСХ преобразования термопар термоэлектрических преобразователей в зависимости от диапазона температур должны соответствовать приведенным в табл. 2—9, 9а—12а.

НСХ преобразования ВР (А)-2 и ВР (А)-3 в диапазоне температур 1800—2500°C приведены в приложениях 2 и 3.

НСХ преобразования ВР (А)-1, в диапазоне температур 2500—2800°C приведена в справочном приложении 4.

Аппроксимирующие полиномы НСХ преобразования термопар термоэлектрических преобразователей приведены в справочном приложении 7.

(Измененная редакция, Изм. № 1, 2).

6. (Исключен, Изм. № 1).

7. По требованию потребителя допускается изготавливать термоэлектрические преобразователи с номинальными статическими характеристиками преобразования, отличными от установленных настоящим стандартом.

(Введен дополнительно, Изм. № 2).

Примечания:

1.  $t$  — значение измеряемой температуры.

2. Пределы допускаемого отклонения т. э. д. с. термопар термоэлектрических преобразователей  $\Delta E$ , мВ, следует рассчитывать по формуле

$$\Delta E = \Delta t \frac{dE}{dt},$$

где  $\Delta t$  — предел допускаемого отклонения по таблице;

$\frac{dE}{dt}$  — чувствительность термопары, рассчитанная для измеренного значения температуры  $t$  на основании данных табл. 2—9, 9а—12а.

(Измененная редакция, Изм. № 1).

### ИСПОЛНИТЕЛИ

И. П. Куритнык, канд. техн. наук; И. Е. Добровинский, канд. техн. наук (руководители темы); Б. И. Гиль, канд. техн. наук; О. И. Лах; Л. М. Соляных; М. Ю. Олексив; Л. С. Андреева; Г. Н. Константинова; Л. И. Лижевская; Б. П. Павлов; Л. П. Сермятина

- 2. УТВЕРЖДЕН И ВВЕДЕН В ДЕЙСТВИЕ** Постановлением Государственного комитета СССР по стандартам от 25.06.84 № 2059

- 3. Стандарт содержит все требования** СТ СЭВ 1059—85

- 4. Взамен** ГОСТ 3044—77

- 5. ССЫЛОЧНЫЕ НОРМАТИВНО-ТЕХНИЧЕСКИЕ ДОКУМЕНТЫ**

| Обозначение НТД, на который дана ссылка | Номер пункта |
|-----------------------------------------|--------------|
| ГОСТ 8.157—75                           | 1            |

- 6. Переиздание** [июль 1989 г.] с Изменениями № 1, 2, 3, утвержденными в октябре 1986 г., феврале 1988 г., сентябре 1989 г. [ИУС 1—87, 5—88, 11—89].

| Величина | Единица      |               |         |
|----------|--------------|---------------|---------|
|          | Наименование | Обозначение   |         |
|          |              | международное | русское |

## ОСНОВНЫЕ ЕДИНИЦЫ СИ

|                               |           |     |      |
|-------------------------------|-----------|-----|------|
| Длина                         | метр      | m   | м    |
| Масса                         | килограмм | kg  | кг   |
| Время                         | секунда   | s   | с    |
| Сила электрического тока      | ампер     | A   | А    |
| Термодинамическая температура | кельвин   | K   | К    |
| Количество вещества           | моль      | mol | моль |
| Сила света                    | кандела   | cd  | кд   |

## ДОПОЛНИТЕЛЬНЫЕ ЕДИНИЦЫ СИ

|               |           |     |     |
|---------------|-----------|-----|-----|
| Плоский угол  | радиан    | rad | рад |
| Телесный угол | стерадиан | sr  | ср  |

## ПРОИЗВОДНЫЕ ЕДИНИЦЫ СИ, ИМЕЮЩИЕ СПЕЦИАЛЬНЫЕ НАИМЕНОВАНИЯ

| Величина                                 | Единица      |               |         | Выражение через основные и дополнительные единицы СИ                 |
|------------------------------------------|--------------|---------------|---------|----------------------------------------------------------------------|
|                                          | Наименование | Обозначение   |         |                                                                      |
|                                          |              | международное | русское |                                                                      |
| Частота                                  | герц         | Hz            | Гц      | $\text{с}^{-1}$                                                      |
| Сила                                     | ньютон       | N             | Н       | $\text{м} \cdot \text{кг} \cdot \text{с}^{-2}$                       |
| Давление                                 | паскаль      | Pa            | Па      | $\text{м}^{-1} \cdot \text{кг} \cdot \text{с}^{-2}$                  |
| Энергия                                  | джоуль       | J             | Дж      | $\text{м}^2 \cdot \text{кг} \cdot \text{с}^{-2}$                     |
| Мощность                                 | ватт         | W             | Вт      | $\text{м}^2 \cdot \text{кг} \cdot \text{с}^{-3}$                     |
| Количество электричества                 | кулон        | C             | Кл      | $\text{с} \cdot \text{А}$                                            |
| Электрическое напряжение                 | вольт        | V             | В       | $\text{м}^2 \cdot \text{кг} \cdot \text{с}^{-3} \cdot \text{А}^{-1}$ |
| Электрическая емкость                    | фарад        | F             | Ф       | $\text{м}^{-2} \text{кг}^{-1} \cdot \text{с}^4 \cdot \text{А}^2$     |
| Электрическое сопротивление              | ом           | $\Omega$      | Ом      | $\text{м}^2 \cdot \text{кг} \cdot \text{с}^{-3} \cdot \text{А}^{-2}$ |
| Электрическая проводимость               | сименс       | S             | См      | $\text{м}^{-2} \text{кг}^{-1} \cdot \text{с}^3 \cdot \text{А}^2$     |
| Поток магнитной индукции                 | вебер        | Wb            | Вб      | $\text{м}^2 \cdot \text{кг} \cdot \text{с}^{-2} \cdot \text{А}^{-1}$ |
| Магнитная индукция                       | тесла        | T             | Тл      | $\text{кг} \cdot \text{с}^{-2} \cdot \text{А}^{-1}$                  |
| Индуктивность                            | генри        | H             | Гн      | $\text{м}^2 \cdot \text{кг} \cdot \text{с}^{-2} \cdot \text{А}^{-2}$ |
| Световой поток                           | люмен        | lm            | лм      | кд · ср                                                              |
